

# Commercial Remote Sensing Data Contracts

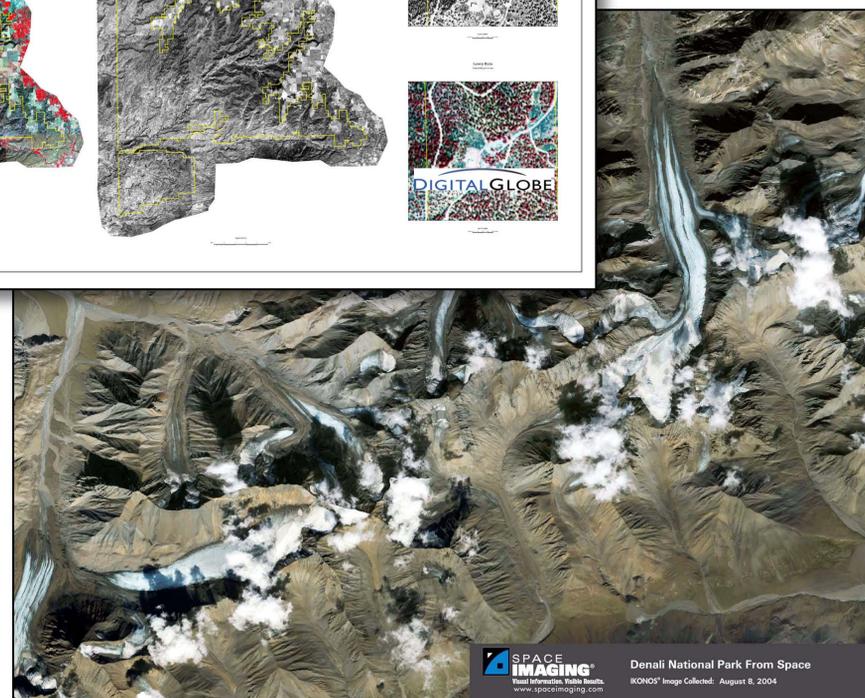

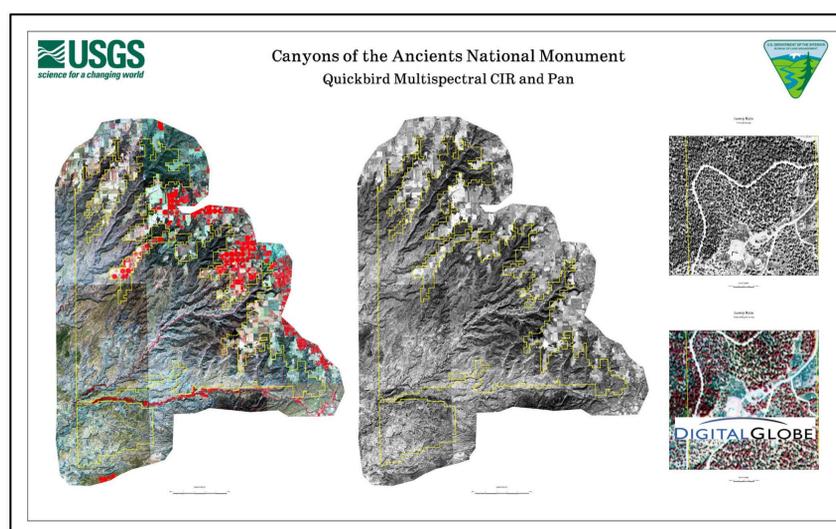

The U. S. Geological Survey's Commercial Remote Sensing Data Contracts (CRSDC) provide government agencies with access to commercially available high resolution airborne and satellite data in a variety of formats and levels of accuracy including:

- Panchromatic
- Natural color
- Multispectral
- Infrared
- Radar
- Aerial photography

Vendors	
<b>Satellite</b>	<b>Airborne</b>
DigitalGlobe	Aerials Express
GeoEye	AirPhoto USA
	GlobeXplorer
	InterMap

## Summary of CRSDC Advantages

- Single point access to commercial aerial and satellite imagery
- Technical analysis of customer requests, ensuring the right product the first time
- Eliminates the need for multiple agencies to establish data-purchase contracts
- Lower cost structures
- Expanded licensing provisions
- Negotiated discounts
- Broad licensing emphasized
- Supports the implementation of the Commercial Remote Sensing Space Policy
- New contracts coming in 2007
